1 QUESTION 2.7

Find the area of the region bounded by curve

$$y = x^2 \quad (1.0.1)$$

and the lines $x=1, x=4$ and x -axis in the first quadrant.

Solution: (1.0.1) can be expressed as

$$y^2 - x = 0 \quad (1.0.2)$$

(1.0.2) which has the form

$$ax^2 + 2bxy + cy^2 + 2dy + 2ex + f = 0 \quad (1.0.3)$$

with parameters

$$\mathbf{V} = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}, \mathbf{u} = \begin{pmatrix} -1 \\ 2 \\ 0 \end{pmatrix}. \quad (1.0.4)$$

Thus, the given curve is a parabola. $\therefore \mathbf{V}$ is diagonal and in standard form, Also,

$$\mathbf{V}\mathbf{p} = \mathbf{0} \quad (1.0.5)$$

$$\Rightarrow \mathbf{p} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \quad (1.0.6)$$

Given $x=1$ Using (1.0.1) we get

$$\mathbf{x} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mathbf{y} \begin{pmatrix} 0 \\ 1 \end{pmatrix} \quad (1.0.7)$$

$$\begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = \begin{pmatrix} 1 & 0 \end{pmatrix} \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mathbf{y} \begin{pmatrix} 1 & 0 \end{pmatrix} \begin{pmatrix} 0 \\ 1 \end{pmatrix} \quad (1.0.8)$$

$$\begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = 1 \quad (1.0.9)$$

Similarly, $x=4$ we get

$$\begin{pmatrix} 4 & 0 \end{pmatrix} \mathbf{x} = 16 \quad (1.0.10)$$

The focus is 2 and the vertex \mathbf{c} is

$$\begin{pmatrix} 1 & -\frac{1}{2} \\ 0 & 0 \\ 0 & 1 \end{pmatrix} \mathbf{c} = \begin{pmatrix} 1 \\ 0 \\ -\frac{1}{2} \end{pmatrix} \quad (1.0.11)$$

$$\Rightarrow \begin{pmatrix} 1 & -\frac{1}{2} \\ 0 & 1 \end{pmatrix} \mathbf{c} = \begin{pmatrix} 1 \\ -\frac{1}{2} \end{pmatrix} \quad (1.0.12)$$

$$\text{or, } \mathbf{c} = \begin{pmatrix} \frac{3}{2} \\ -\frac{1}{2} \end{pmatrix} \quad (1.0.13)$$

The direction vector and normal vectors are

$$\mathbf{m} = \begin{pmatrix} 5 \\ 1 \end{pmatrix}, \mathbf{n} = \begin{pmatrix} 1 \\ -5 \end{pmatrix}. \quad (1.0.14)$$

$$\kappa = \frac{\mathbf{p}_1^T \mathbf{u}}{\mathbf{p}_1^T \mathbf{n}}, \quad (1.0.15)$$

From (1.0.15), (1.0.14) and (1.0.6),

$$\kappa = 0 \quad (1.0.16)$$

which, upon substitution in (1.0.17)

$$\begin{pmatrix} \mathbf{u} + \kappa \mathbf{n}^T \\ \mathbf{V} \end{pmatrix} \mathbf{q} = \begin{pmatrix} -f \\ \kappa \mathbf{n} - \mathbf{u} \end{pmatrix} \quad (1.0.17)$$

and simplification yields the matrix equation

$$\begin{pmatrix} 0 & \frac{-1}{2} \\ 0 & 0 \\ 0 & 1 \end{pmatrix} \mathbf{q} = \begin{pmatrix} 0 \\ 0 \\ \frac{1}{2} \end{pmatrix} \quad (1.0.18)$$

$$\Rightarrow \begin{pmatrix} 0 & \frac{-1}{2} \\ 0 & 1 \end{pmatrix} \mathbf{q} = \begin{pmatrix} 0 \\ \frac{1}{2} \end{pmatrix} \quad (1.0.19)$$

$$\text{or, } \mathbf{q} = \begin{pmatrix} \frac{-1}{4} \\ \frac{1}{2} \end{pmatrix} \quad (1.0.20)$$

Fig. 1.1 verifies the above results.

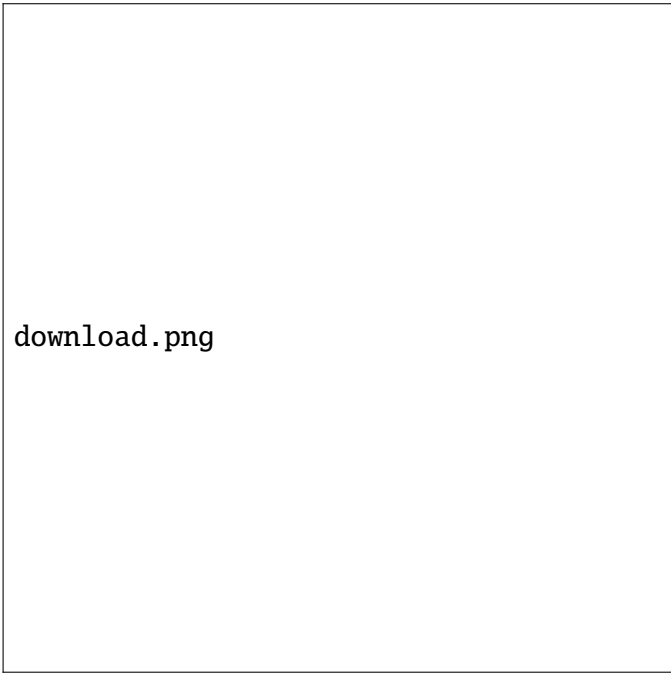

Fig. 1.1: Tangent to parabola in (1.0.1) with slope $\frac{1}{5}$.
