

# Assignment No.5

Valli Devi Bolla

Download all python codes from

<https://github.com/Vallidevibolla/Assignment-4/blob/main/code.py>

with eigen parameters

$$\lambda_1 = 0, \lambda_2 = 1 \quad (2.0.6)$$

and latex-tikz codes from

<https://github.com/Vallidevibolla/Assignment-4/blob/main/main.tex>

Given  $x=1$  Using (1.0.1) we get

$$\mathbf{x} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mathbf{y} \begin{pmatrix} 0 \\ 1 \end{pmatrix} \quad (2.0.7)$$

Question taken from

[https://github.com/gadepall/ncert/blob/main/linalg/quadratic\\_forms/gvv\\_ncert\\_quadratic\\_forms.pdf-Q.no.2.7](https://github.com/gadepall/ncert/blob/main/linalg/quadratic_forms/gvv_ncert_quadratic_forms.pdf-Q.no.2.7)

$$\begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = \begin{pmatrix} 1 & 0 \end{pmatrix} \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mathbf{y} \begin{pmatrix} 1 & 0 \end{pmatrix} \begin{pmatrix} 0 \\ 1 \end{pmatrix} \quad (2.0.8)$$

$$\begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = 1 \quad (2.0.9)$$

Similarly,  $x=4$  we get

$$\begin{pmatrix} 4 & 0 \end{pmatrix} \mathbf{x} = 16 \quad (2.0.10)$$

## 1 QUESTION 2.7

Find the area of the region bounded by curve

$$\mathbf{y}^2 = \mathbf{x} \quad (1.0.1)$$

and the lines  $x=1, x=4$  and  $x$ -axis in the first quadrant.

The vertex of parabola can be expressed using  $\begin{pmatrix} 1 & 0 \end{pmatrix}_{x=4}$

$$\begin{pmatrix} \mathbf{u}^T + \mathbf{n}\mathbf{p}^T \\ \mathbf{v} \end{pmatrix} \mathbf{c} = \begin{pmatrix} -f \\ \mathbf{n}\mathbf{p} - \mathbf{u} \end{pmatrix} \quad (2.0.11)$$

## 2 SOLUTION

(1.0.1) can be written as

$$\mathbf{y}^2 - \mathbf{x} = 0 \quad (2.0.1)$$

(2.0.1) which has the form of

$$\mathbf{a}\mathbf{x}^2 + 2\mathbf{b}\mathbf{x}\mathbf{y} + \mathbf{c}\mathbf{y}^2 + 2\mathbf{d}\mathbf{y} + 2\mathbf{e}\mathbf{x} + \mathbf{f} = 0 \quad (2.0.2)$$

The matrix parameters are

$$\mathbf{V} = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}, \mathbf{u} = \begin{pmatrix} -1 \\ 0 \end{pmatrix}, \mathbf{f} = 0. \quad (2.0.3)$$

Thus, the given curve is a parabola.  $\therefore \mathbf{V}$  is diagonal and in standard form, Also,

$$\mathbf{V}\mathbf{p} = \mathbf{0} \quad (2.0.4)$$

$$\Rightarrow \mathbf{p} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \quad (2.0.5)$$

$$\begin{pmatrix} 1 & \frac{1}{2} \\ 0 & 0 \end{pmatrix} \mathbf{c} = \begin{pmatrix} -4 \\ 0 \\ \frac{-1}{2} \end{pmatrix} \quad (2.0.12)$$

$$\Rightarrow \begin{pmatrix} 1 & \frac{1}{2} \\ 0 & 0 \end{pmatrix} \mathbf{c} = \begin{pmatrix} -4 \\ \frac{-1}{2} \end{pmatrix} \quad (2.0.13)$$

$$\text{or, } \mathbf{c} = \begin{pmatrix} \frac{-13}{2} \\ 5 \end{pmatrix} \quad (2.0.14)$$

The direction vector and normal vectors are

$$\mathbf{m} = \begin{pmatrix} 5 \\ 1 \end{pmatrix}, \mathbf{n} = \begin{pmatrix} 1 \\ -5 \end{pmatrix}. \quad (2.0.15)$$

$$\kappa = \frac{\mathbf{p}_1^T \mathbf{u}}{\mathbf{p}_1^T \mathbf{n}}, \quad (2.0.16)$$

From (2.0.16), (2.0.15) and (2.0.5),

$$\kappa = 0 \quad (2.0.17)$$

which, upon substitution in (2.0.18)

$$\begin{pmatrix} \mathbf{u} + \kappa \mathbf{n}^T \\ \mathbf{V} \end{pmatrix} \mathbf{q} = \begin{pmatrix} -f \\ \kappa \mathbf{n} - \mathbf{u} \end{pmatrix} \quad (2.0.18)$$

and simplification yields the matrix equation

$$\begin{pmatrix} 0 & \frac{-1}{2} \\ 0 & 0 \\ 0 & 1 \end{pmatrix} \mathbf{q} = \begin{pmatrix} 0 \\ 0 \\ \frac{1}{2} \end{pmatrix} \quad (2.0.19)$$

$$\Rightarrow \begin{pmatrix} 0 & \frac{-1}{2} \\ 0 & 1 \end{pmatrix} \mathbf{q} = \begin{pmatrix} 0 \\ \frac{1}{2} \end{pmatrix} \quad (2.0.20)$$

$$\text{or, } \mathbf{q} = \begin{pmatrix} \frac{-1}{4} \\ \frac{1}{2} \end{pmatrix} \quad (2.0.21)$$

*Secant:* The points of intersection of the line

$$L: \mathbf{x} = \mathbf{q} + \mu \mathbf{m} \quad \mu \in \mathbb{R} \quad (2.0.22)$$

$$\mathbf{x}_i = \mathbf{q} + \mu_i \mathbf{m} \quad (2.0.23)$$

where

$$\mu_i = \frac{1}{\mathbf{m}^T \mathbf{V} \mathbf{m}} \left( -\mathbf{m}^T (\mathbf{V} \mathbf{q} + \mathbf{u}) \pm \sqrt{[\mathbf{m}^T (\mathbf{V} \mathbf{q} + \mathbf{u})]^2 - (\mathbf{q}^T \mathbf{V} \mathbf{q} + 2\mathbf{u}^T \mathbf{q} + f)(\mathbf{m}^T \mathbf{V} \mathbf{m})} \right) \quad (2.0.24)$$

$\therefore \mathbf{q}$  is the point of contact,  $\mathbf{q}$  satisfies parabola equation and

$$\mathbf{q}^T \mathbf{V} \mathbf{q} + 2\mathbf{u}^T \mathbf{q} + f = 0 \quad (2.0.25)$$

Given the point of contact  $\mathbf{q}$ , the equation of a tangent is

$$(\mathbf{V} \mathbf{q} + \mathbf{u})^T \mathbf{x} + \mathbf{u}^T \mathbf{q} + f = 0 \quad (2.0.26)$$

From (2.0.24) we get

$$\mu_1 = \frac{1}{2}, \mu_2 = \frac{-1}{2}$$

The lines (2.0.9), (2.0.10) can be written in parametric form in (2.0.23) we get

$$\mathbf{x}_{i1} = \begin{pmatrix} \frac{-1}{4} \\ \frac{1}{2} \end{pmatrix} + \mu_i \begin{pmatrix} 0 \\ 1 \end{pmatrix} \quad (2.0.27)$$

$$\mathbf{x}_{i2} = \begin{pmatrix} \frac{-1}{4} \\ \frac{1}{2} \end{pmatrix} + \mu_i \begin{pmatrix} 0 \\ 4 \end{pmatrix} \quad (2.0.28)$$

Substituting  $\mu_1$  and  $\mu_2$  values in (2.0.27), (2.0.28) we get

$$\mathbf{K}_1 = \begin{pmatrix} \frac{-1}{4} \\ \frac{1}{2} \end{pmatrix}, \mathbf{L}_1 = \begin{pmatrix} \frac{-1}{4} \\ 0 \end{pmatrix} \quad (2.0.29)$$

$$\mathbf{K}_2 = \begin{pmatrix} \frac{-1}{4} \\ \frac{5}{2} \end{pmatrix}, \mathbf{L}_2 = \begin{pmatrix} \frac{-1}{4} \\ \frac{-3}{2} \end{pmatrix} \quad (2.0.30)$$

The area enclosed by parabola and line can be given as

$A = \text{Area under line} - \text{Area under curve}$

$$\Rightarrow \boxed{A = A_1 - A_3}$$

Thus area under the lines (2.0.9), (2.0.10) i.e.,

$$A_1 = \frac{1}{2}$$

Area under the parabola (1.0.1) i.e.,

$$\int A_3 = \int \sqrt{x} dx$$

$$\boxed{A_3 = \frac{14}{3}}$$

Putting these values in (2) we get

$$A = -4.17, -13.17 \text{ units}$$

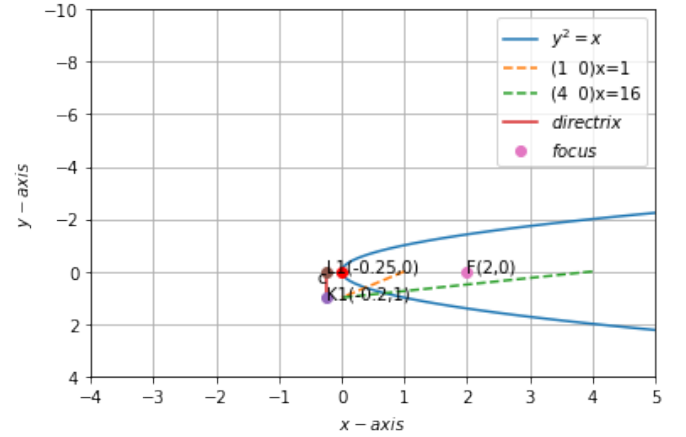

Fig. 2.1: Tangent to parabola in (1.0.1) with slope  $\frac{1}{5}$ .
