Question taken from

https://github.com/gadepall/ncert/blob/main/linalg/quadratic_forms/gvv_ncert_quadratic_forms.pdf−Q.no.2.7

1 Question 2.7

Find the area of the region bounded by curve

$$\mathbf{y^2} = \mathbf{x} \tag{1.0.1}$$

and the lines x=1,x=4 and x-axis in the first quadrant.

2 Solution

(1.0.1) can be written as

$$y^2 - x = 0 \tag{2.0.1}$$

The matrix parameters are

$$\mathbf{V} = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}, \mathbf{u} = \begin{pmatrix} \frac{-1}{2} \\ 0 \end{pmatrix}, \mathbf{f} = 0. \tag{2.0.2}$$

Thus, the given curve is a parabola. $\because$ $\mathbf{V}$ is diagonal and in standard form, Also,

$$\mathbf{Vp} = \mathbf{0} \tag{2.0.3}$$

$$\implies \mathbf{p} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{2.0.4}$$

with eigen parameters

$$\lambda_1 = 0, \lambda_2 = 1 \tag{2.0.5}$$

Given x=1 Using (1.0.1) we get

$$\mathbf{x} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mathbf{y} \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.6}$$

$$\begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = \begin{pmatrix} 1 & 0 \end{pmatrix} \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mathbf{y} \begin{pmatrix} 1 & 0 \end{pmatrix} \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.7}$$

$$\begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = 1 \tag{2.0.8}$$

Similarly, x=4 we get

$$\begin{pmatrix} 4 & 0 \end{pmatrix} \mathbf{x} = 16 \tag{2.0.9}$$

$$\implies \begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} = 4 \tag{2.0.10}$$

The direction vector and normal vectors are

$$\mathbf{m} = \begin{pmatrix} 0 \\ 1 \end{pmatrix}, \mathbf{n} = \begin{pmatrix} 1 \\ 0 \end{pmatrix}. \tag{2.0.11}$$

The equation of parabola is

$$\mathbf{q}^T \mathbf{V} \mathbf{q} + 2\mathbf{u}^T \mathbf{q} + f = 0 \tag{2.0.12}$$

The vertex of conic section in (2.0.12) is given by c using

$$\begin{pmatrix} \mathbf{u^T} + \mathbf{np}^T \\ \mathbf{V} \end{pmatrix} \mathbf{c} = \begin{pmatrix} -f \\ \mathbf{np} - \mathbf{u} \end{pmatrix} \tag{2.0.13}$$

$$\begin{pmatrix} \frac{-1}{4} & 0 \\ 0 & 0 \\ 0 & 1 \end{pmatrix} \mathbf{c} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \tag{2.0.14}$$

$$\implies \begin{pmatrix} \frac{-1}{4} & 0 \\ 0 & 1 \end{pmatrix} \mathbf{c} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \tag{2.0.15}$$

$$\text{or, } \mathbf{c} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \tag{2.0.16}$$

$$\kappa = \frac{\mathbf{p}_1^T \mathbf{u}}{\mathbf{p}_1^T \mathbf{n}}, \tag{2.0.17}$$

From (2.0.17), (2.0.11) and (2.0.4),

$$\kappa = \frac{-1}{2} \tag{2.0.18}$$

which, upon substitution in (2.0.19)

$$\begin{pmatrix} \mathbf{u}+\kappa\mathbf{n}^T \\ \mathbf{V} \end{pmatrix}\mathbf{q} = \begin{pmatrix} -f \\ \kappa\mathbf{n}-\mathbf{u} \end{pmatrix} \tag{2.0.19}$$

and simplification yields the matrix equation

$$\begin{pmatrix} \frac{-1}{2} & 0 \\ 0 & 0 \\ 0 & 1 \end{pmatrix}\mathbf{q} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \tag{2.0.20}$$

$$\implies \begin{pmatrix} \frac{-1}{2} & 0 \\ 0 & 1 \end{pmatrix}\mathbf{q} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \tag{2.0.21}$$

$$\text{or, } \mathbf{q} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \tag{2.0.22}$$

Secant: The points of intersection of the line

$$L: \quad \mathbf{x} = \mathbf{q} + \mu\mathbf{m} \quad \mu \in \mathbb{R} \tag{2.0.23}$$

$$\mathbf{x}_i = \mathbf{q} + \mu_i\mathbf{m} \tag{2.0.24}$$

where

$$\mu_i = \frac{1}{\mathbf{m}^T\mathbf{V}\mathbf{m}}\Big(-\mathbf{m}^T(\mathbf{V}\mathbf{q}+\mathbf{u}) \pm \sqrt{[\mathbf{m}^T(\mathbf{V}\mathbf{q}+\mathbf{u})]^2 - (\mathbf{q}^T\mathbf{V}\mathbf{q}+2\mathbf{u}^T\mathbf{q}+f)(\mathbf{m}^T\mathbf{V}\mathbf{m})}\Big) \tag{2.0.25}$$

$\because$ $\mathbf{q}$ is the point of contact, $\mathbf{q}$ satisfies parabola equation

Given the point of contact $\mathbf{q}$, the equation of a tangent is

$$(\mathbf{V}\mathbf{q}+\mathbf{u})^T\mathbf{x} + \mathbf{u}^T\mathbf{q} + f = 0 \tag{2.0.26}$$

From (2.0.25) we get
$\mu_1 = 1, \mu_2 = -1$

The lines (2.0.8), (2.0.9) can be written in parametric form in (2.0.24) we get

$$\mathbf{x}_i = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + \mu_i\begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.27}$$

Substituting $\mu_1, \mu_2 valuein (2.0.27) weget$

$$\mathbf{x}_i = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + 1\begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.28}$$

$$\implies \mathbf{K_1} = \begin{pmatrix} 1 \\ 1 \end{pmatrix} \tag{2.0.29}$$

$$\mathbf{x}_i = \begin{pmatrix} 1 \\ 0 \end{pmatrix} + -1\begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.30}$$

$$\implies \mathbf{L_1} = \begin{pmatrix} 1 \\ -1 \end{pmatrix} \tag{2.0.31}$$

For x= 4,

$$\mathbf{x}_i = \begin{pmatrix} 4 \\ 0 \end{pmatrix} + \mu_i\begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.32}$$

$$\mathbf{x}_i = \begin{pmatrix} 4 \\ 0 \end{pmatrix} + 1\begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.33}$$

$$\implies \mathbf{K_2} = \begin{pmatrix} 4 \\ 1 \end{pmatrix} \tag{2.0.34}$$

$$\mathbf{x}_i = \begin{pmatrix} 4 \\ 0 \end{pmatrix} + -1\begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{2.0.35}$$

$$\implies \mathbf{L_2} = \begin{pmatrix} 4 \\ -1 \end{pmatrix} \tag{2.0.36}$$

The area enclosed by parabola and line can be given as
A = Area under line - Area under curve

$$\implies \boxed{\mathbf{A} = \mathbf{A_1} - \mathbf{A_3}} \tag{2.0.37}$$

Thus area under the lines (2.0.8) , (2.0.9) is given by
$A_1 = \frac{1}{2}, \mathbf{A_2} = \frac{-17}{2}$
Area under the parabola(1.0.1) i.e,
$A_3 = \int x^{\frac{1}{2}} dx$
$\implies \boxed{\mathbf{A_3} = \frac{14}{3}}$
Putting these values in (2.0.37) we get
A =-4.17,-13.17 units

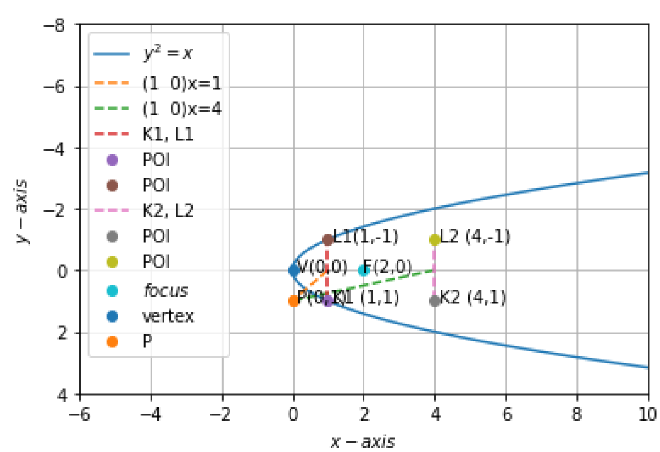

Fig. 2.1: Parabola $y^2 = \mathbf{x}$
